

KNOWLEDGE MANAGEMENT

Knowledge Management is a discipline and organizational function that promotes an integrated approach to identifying, capturing, evaluating, retrieving, and sharing all of an enterprise's information assets. These assets may include databases, documents, policies, procedures, and previously un-captured expertise and experience in individual workers. To compete in the digital age, an enterprise must have a comprehensive view of its most critical asset: its own data and everything that affects it.

Beyond an organization's own information and knowledge assets, KM as conceived now, and this expansion arrived early on, includes relevant information assets from wherever relevant. KM, therefore, enables the organization's ability to seek and obtain meaningful and relevant data from its environment, providing a more circumspect view of its assets.

Benefits

Break records, not ranks

Monitor student and subject activities real time for quick coordination and conflict resolution with the appropriate authority immediately as they arise.

Build bridges, not cages.

Departments, subjects, instructors, classes, sections, and students are among those with the most webbed relationship in the school ecosystem. Linking them systematically allows wider freedom to access information as needed, when needed.

No Long queues, just a long list of benefits

Only get involved in planning and then experience school transactions falling rightly and automatically in place. Processing more transactions with less queues and lesser wait time starts after convenient configurations of school requirements and student eligibility.

Your response to the needs of your institution is an intuitively efficient yet comprehensive school registration system that is quick to access, easy to engage, and simple to use.
